## SENATE CONCURRENT RESOLUTION

DESIGNATING FEBRUARY OF EACH YEAR AS LIVER AND BILE DUCT CANCER AWARENESS MONTH IN THE STATE OF HAWAII.

WHEREAS, the Legislature finds that according to the National Cancer Institute's Surveillance, Epidemiology, and End Results Program (SEER), Hawaii has the highest death rate of liver and bile duct cancer in the nation; and

WHEREAS, according to SEER, Asian and Pacific Islanders have the highest risk of being diagnosed with liver and bile duct cancer compared with other ethnicities; and

WHEREAS, according to the University of Hawaii Cancer Center Hawaii Tumor Registry, there are 184 new cases of liver cancer and bile duct cancer in Hawaii every year; and

WHEREAS, according to the Hawaii Tumor Registry, liver and bile duct cancer are among the top ten newly diagnosed cases and cause of cancer deaths each year; and

WHEREAS, according to SEER, Hawaii has a 33 percent higher incidence of liver and bile duct cancer than the national statistical norm; and

WHEREAS, according to the Hawaii Tumor Registry, from 2004 to 2013, data on liver cancer and bile duct cancer indicates an annual increase in Hawaii of 2.1 percent in males and 1.3 percent in females, while the incidence of many other cancers such as colon, lung, prostate, and stomach cancer declined; and

WHEREAS, currently over one thousand people in Hawaii are fighting liver cancer and bile duct cancer, both of which are almost always fatal; and

WHEREAS, research indicates that liver flukes and aflatoxins may also cause liver and bile duct cancer in addition to the hepatitis B or hepatitis C virus and liver diseases; and

1 2

WHEREAS, liver flukes, a type of parasitic flatworm found in freshwater fish, shellfish, cattle, and vegetables grown in fresh water, have been previously found in Hawaii; and

WHEREAS, aflatoxins, a toxin produced by a fungus abundant in warm and humid climates that can grow on foods such as rice, grains, and nuts that are stored improperly or for long periods of time may also be present in Hawaii; and

WHEREAS, research shows that the most common way to get a liver fluke infection is by eating raw or undercooked freshwater fish and freshwater vegetables, such as watercress, that are contaminated with the parasites, which, after having been ingested, travel from the intestines to the bile ducts in the liver where they then live and grow; and

WHEREAS, there is little public awareness and education around liver and bile duct cancer and the relationship and risks that Hawaii's local diet and environment present to increasing the risk of contracting these diseases; and

WHEREAS, it is critical to reinforce the need for people to discuss their individual risk factors for liver and bile duct cancer with their health care providers and understand the recommendations and benefits of reducing risks and increasing prevention efforts; now, therefore,

BE IT RESOLVED by the Senate of the Thirtieth Legislature of the State of Hawaii, Regular Session of 2019, the House of Representatives concurring, that beginning in 2020, and every year thereafter, the month of February shall be designated as Liver and Bile Duct Cancer Awareness Month in Hawaii; and

BE IT FURTHER RESOLVED that the Department of Health; University of Hawaii Cancer Center; American Cancer Society Cancer Action Network, Inc.; City and County of Honolulu; and Counties of Hawaii, Kauai, and Maui are urged to continue to work toward promoting awareness and educating the public about 3 4 liver and bile duct cancer and the relationship and risks the local diet and environment may have on contracting the disease; and

BE IT FURTHER RESOLVED that certified copies of this

BE IT FURTHER RESOLVED that certified copies of this
Concurrent Resolution be transmitted to the Governor; Mayor of
the City and County of Honolulu; Mayor of the County of Kauai;
Mayor of the County of Maui; Mayor of the County of Hawaii;
Director of Health; Director of the University of Hawaii Cancer
Center; and President of the American Cancer Society Cancer
Action Network, Inc.
